

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	11 September 2026
Team ID	Individual
Name	Mohammad Naheed Jahan
Project Name	Employee Raise Issue – Record Producer & Service Portal Integration
Maximum Marks	4 Marks

Functional Requirements:

The functional requirements of the proposed solution are listed below.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Employee Issue Submission	Offer an Employee Center/Service Portal option that lets employees raise workplace or technical issues. The employee fills in the required issue details and submits the request.
FR-2	Issue Data Collection & Validation	Capture the requester, category, subcategory, short description, and other required information. Use UI Policies to enforce mandatory fields and control how fields behave.
FR-3	Dynamic Categorization	Let employees choose an issue category and show the matching subcategories based on that choice. Make sure suitable options are available during submission.
FR-4	Issue Record Creation	Automatically generate an employee issue record from the submitted information. Store issue details such as requester, category, subcategory, description, state, priority, and assignment group.
FR-5	Issue Assignment & Management	Let support/admin users assign issues to the right support group, update priority, and manage the issue across its lifecycle.
FR-6	Issue Tracking & Status Management	Let employees and authorized users follow the issue status. Support status updates such as New, In Progress, Resolved, and Closed.
FR-7	Portal & Widget Access	Provide custom Employee Center widgets and portal components that give quick access to issue submission, issue information, and relevant self-service options.
FR-8	Issue Resolution & Closure	Let the support team record resolution details and close the issue once the problem is resolved.

Non-functional Requirements:

The non-functional requirements of the proposed solution are listed below.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Employee Center and the issue submission form should be clear, simple, and easy for employees to use.
NFR-2	Security	Only authorized users should be able to view, create, or manage employee issue records and permissions.
NFR-3	Reliability	The system should reliably create and maintain issue records without losing any submitted information.
NFR-4	Performance	Request submission, workflow execution, approval routing, and task creation should finish within an acceptable response time.
NFR-5	Availability	The Employee Center and issue management features should be accessible to employees and support users through the configured ServiceNow instance.
NFR-6	Scalability	The solution should be able to handle growing numbers of employees, issue records, categories, subcategories, and support groups without major redesign.
