1. INTRODUCTION

1.1 Project Overview

The project, “Employee Raise Issue Management System using ServiceNow”, is a ServiceNow Employee Center / Service Portal based application that gives employees a centralised place to raise workplace and IT-related issues. The employee opens the portal, goes to Raise an Issue, and submits a structured form provided by the Record Producer “Raise Employee Issue”. On submission, ServiceNow creates an Employee Issue record (ticket) in a custom Employee Raise Issue table. During testing, a submission created the ticket EMP0001004.

The solution is built as a custom ServiceNow application containing a custom table, a Record Producer with catalog variables mapped to the table fields, and UI policies / dependencies for the Employee Issue form. The portal experience is customised with Service Portal Designer and a custom Commercial Services widget written in HTML and CSS/SCSS. The application is connected to GitHub for source control.

Scope of the implemented version: issue creation and record management. The project is not AI-based and does not include automated issue resolution, automatic assignment, SLA automation, notifications, Flow Designer workflows or REST integrations. Such capabilities are listed only as Future Enhancements in Section 10.

1.2 Purpose

The purpose of the project is to make it simpler for employees to raise workplace / IT issues and to ensure each issue is captured as a structured, trackable record in ServiceNow.

- Provide a centralised Employee Center / Service Portal from which employees can raise issues.
- Provide a structured issue form through the Record Producer “Raise Employee Issue”.
- Capture Requester, Category, Subcategory, State and Short Description for every issue.
- Create an Employee Issue record in a custom Employee Raise Issue table on submission.
- Support tracking and management of the issue records in ServiceNow.
- Provide a customised portal experience with a custom Commercial Services widget.
- Manage the application through GitHub source control.

2. IDEATION PHASE

2.1 Problem Statement

Employees regularly face workplace and IT issues such as network (for example VPN), hardware (laptop, server), software and access (forgotten password) problems. When there is no single, structured way to report these issues, reports are made through scattered informal channels, often lack details such as category or requester, and are not captured as dedicated records. This makes issues harder to track and manage, and leaves employees uncertain about whether their issue has been recorded.

Final Customer Problem Statement: I am an employee who faces a workplace or IT issue. I am trying to report it clearly to the right place, but there is no single structured way to raise it, so reports can be scattered and incomplete, which makes me feel uncertain about whether my issue has been recorded.

2.2 Empathy Map Canvas

The empathy map focuses on the employee as the primary user who raises issues through the Employee Center portal. It was prepared from an analysis of the problem context.

Think & Feel What does the user think and feel? • I need this problem fixed so I can continue my work. • Where do I report this? • Has my issue been recorded? • I hope the process is simple and clear.	Hear What does the user hear? • Colleagues suggest different ways of contacting IT. • Instructions from a manager or IT about reporting problems. • IT policies about equipment and access.
See What does the user see? • The Employee Center portal with Search, Quick Links, My Active Items and Recommended for You. • A Raise an Issue section. • The Raise Employee Issue form. • The Commercial Services widget.	Say & Do What does the user say and do? • Opens Employee Center. • Goes to Raise an Issue and opens Raise Employee Issue. • Selects requester, category, subcategory and state; enters a short description; adds an attachment if required. • Submits the issue.
Pain What are the user's pains or frustrations? • No single place to report issues. • Free-form reports miss details. • Unsure whether the issue was recorded. • Not sure how to categorise the issue.	Gain What does the user hope to achieve? • One clear entry point. • A structured form with predefined choices. • A ticket record created on submission. • Record tracked / managed in ServiceNow.

Figure 1. Empathy Map – Employee raising a workplace / IT issue

- **Needs:** one clear place to raise an issue, a simple structured form, and a record of the submitted issue.
- **Pain points:** scattered reporting channels, incomplete reports and uncertainty about whether the issue was logged.
- **Expected gain:** a consistent submission experience and a ticket record that can be tracked and managed in ServiceNow.

2.3 Brainstorming

Brainstorming was used to identify practical ideas that could improve how employees raise issues. Ideas were grouped into issue submission, data capture, portal experience and future automation. The table separates ideas that were implemented from those planned as Future Enhancements.

Idea	Importance	Feasibility	Status
Employee Center portal as a single entry point	High	High	Implemented
Record Producer issue form	High	High	Implemented
Custom Employee Raise Issue table	High	High	Implemented
Category / Subcategory / State choice fields	High	High	Implemented

Idea	Importance	Feasibility	Status
UI policies for field dependencies	Medium	High	Implemented
Custom Commercial Services widget	Medium	High	Implemented
GitHub source control	Medium	High	Implemented
Automatic assignment to support groups	High	Medium	Future Enhancement
Automated notifications	Medium	High	Future Enhancement
SLA management and escalation	Medium	Medium	Future Enhancement
Flow Designer workflow and automated state transitions	High	Medium	Future Enhancement
Knowledge article recommendations	Medium	Medium	Future Enhancement
Dashboards and analytics	Medium	High	Future Enhancement

Selected idea: provide a ServiceNow Employee Center portal with a Record Producer that creates issue records in a custom table. This idea was selected because it directly addresses the identified problem and can be implemented with standard ServiceNow capabilities.

3. REQUIREMENT ANALYSIS

3.1 Customer Journey Map

The journey describes the employee experience from facing an issue to having a record in ServiceNow. The stages are Awareness, Access, Raise Issue, Submit and Follow-up. The emotional row shows the intended experience; the Opportunities row lists Future Enhancements only.

Stage	1. Awareness	2. Access	3. Raise Issue	4. Submit	5. Follow-up
Steps	Employee faces a network, software, hardware or access problem.	Opens the Employee Center portal.	Goes to Raise an Issue, opens Raise Employee Issue and fills in the form.	Submits the issue.	An issue record exists in ServiceNow.
Interactions	Colleagues, manager or IT staff (informal).	Employee Center homepage, Search, Quick Links.	Record Producer form; attachment if required.	Submit action on the form.	Employee Raise Issue record (e.g. EMP0001004).
Goals	Find where to report the issue.	Reach the right place quickly.	Describe the issue clearly.	Get the issue recorded.	Have the issue tracked and managed.
Positive moments	A clear entry point exists.	One portal with a visible Raise an Issue section.	Predefined choices simplify categorising.	A ticket record is created.	Record can be tracked / managed in ServiceNow.
Negative moments (without a structured process)	Unsure whom to contact.	Several channels to choose from.	Free-form reports miss details.	Unsure if the report was logged.	No dedicated record to follow up.
Opportunities (Future)	Knowledge article recommendations.	Dashboards and analytics.	Approval workflow where required.	Automated notifications.	Automatic assignment, SLA, escalation, resolution notes.
Intended emotion	Concerned	Hopeful	Focused	Reassured	Informed

Figure 2. Customer Journey Map – Raising an Employee Issue

The main opportunity areas are a single clear entry point, complete information capture through a structured form, and a dedicated record for every submitted issue.

3.2 Solution Requirement

The following functional and non-functional requirements describe the behaviour and quality characteristics of the solution. The Status column shows what is implemented in the current version.

Functional Requirements

FR No.	Functional Requirement	Sub Requirement / Expected Behavior	Status
FR-1	Portal Access	Employees can open the Employee Center-based Service Portal (https://dev402706.service-now.com/employee_request), which provides Search, Raise an Issue, Raise Ticket, Quick Links, My Active Items and Recommended for You.	Implemented
FR-2	Issue Submission Form	The Record Producer “Raise Employee Issue” lets the employee enter issue information in a structured form.	Implemented
FR-3	Requester Capture	The Requester variable is a reference to the sys_user table.	Implemented

FR No.	Functional Requirement	Sub Requirement / Expected Behavior	Status
FR-4	Categorisation	Category (Network, Software, Hardware, Access) and Subcategory (VPN, Laptop, Server, Forgot Password) are multiple-choice variables.	Implemented
FR-5	State Capture	State (New, In Progress, Resolved, Closed) is a multiple-choice variable mapped to the State field.	Implemented
FR-6	Short Description	A single-line text variable captures the short description of the issue.	Implemented
FR-7	Attachment	The employee can add an attachment if required.	Implemented
FR-8	Record Creation	Submitting the form creates an Employee Issue record in the custom Employee Raise Issue table, with variables mapped to the table fields.	Implemented
FR-9	Record Tracking / Management	Employee Issue records can be tracked and managed in ServiceNow.	Implemented
FR-10	Form Behaviour	UI policies / dependencies configured for category / subcategory and field behaviour on the Employee Issue form.	Implemented
FR-11	Portal Customisation	A custom Commercial Services widget (HTML, CSS/SCSS) is displayed on the Employee Center homepage.	Implemented
FR-12	Source Control	The ServiceNow application is connected to and committed to the GitHub repository SriyaRam12/employee-issue-management-servicenow.	Implemented

Non-functional Requirements

NFR No.	Requirement	Description	Status in this project
NFR-1	Usability	The issue form should be simple and easy for employees to use.	Addressed through a short form with predefined choices.
NFR-2	Security	Only authorised users should access the portal and records.	Relies on ServiceNow platform features; no custom security controls or security testing are documented.
NFR-3	Reliability	Submissions should create records without losing information.	Verified for the test submissions performed (e.g. EMP0001004).
NFR-4	Performance	Submission should complete in acceptable time.	Not formally measured.
NFR-5	Availability	The portal should be available when employees need it.	Depends on the ServiceNow instance; not separately tested.
NFR-6	Scalability	The solution should be extendable to more users, issues and fields.	Design supports extension; no load testing performed.
NFR-7	Maintainability	Changes should be traceable and manageable.	Application connected to GitHub source control.

3.3 Data Flow Diagram

The data flow shows how an issue moves through the platform. The employee submits issue details through the Employee Center portal and the Raise Employee Issue Record Producer. The Requester is looked up in the sys_user table, and a new record is stored in the Employee Raise Issue table. Authorised ServiceNow users can then track and manage the stored records.

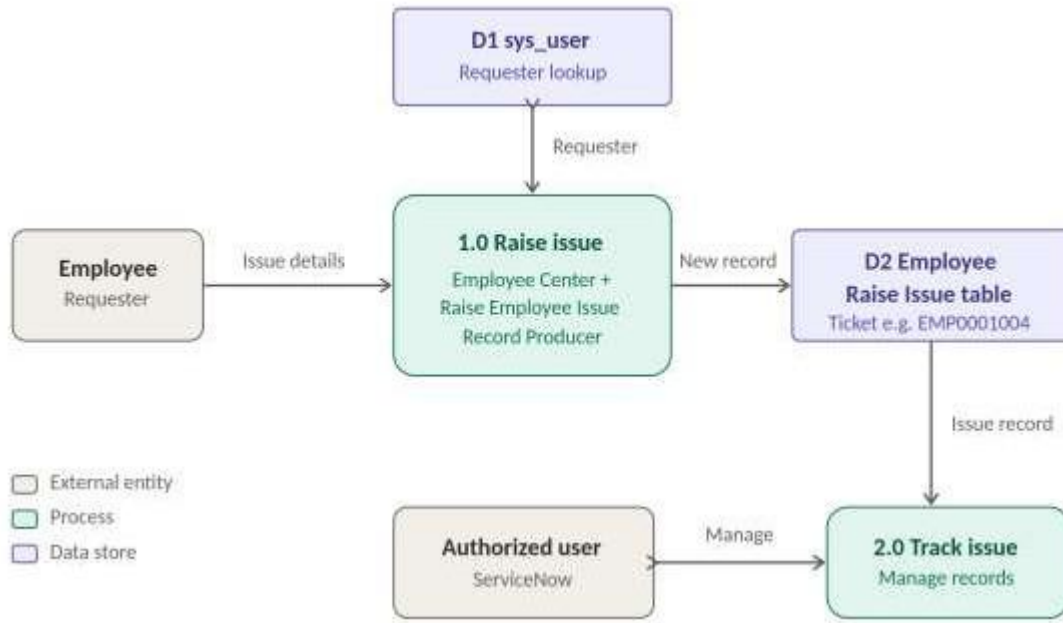

Figure 3. Data Flow Diagram (Level 0) – Employee Raise Issue Management System

Stage	ServiceNow Record / Table	Purpose
Portal entry	Employee Center / Service Portal	Employee opens the portal and goes to Raise an Issue.
Issue form	Record Producer “Raise Employee Issue”	Captures the issue information through variables.
Requester lookup	sys_user	Provides the Requester reference.
Issue record	Employee Raise Issue (custom table)	Stores each submission as a record with a ticket number.
Tracking / management	Employee Raise Issue records in ServiceNow	Records are tracked and managed in ServiceNow.

3.4 Technology Stack

Component	Technology	Purpose
Platform	ServiceNow	Hosts the application, portal, tables and records.
User Interface	Employee Center / Service Portal; Service Portal Designer	Employee accesses the portal and raises the issue.
Custom Widget	Service Portal widget with HTML and CSS/SCSS	Displays the Commercial Services section.
Application	Custom ServiceNow application	Contains the table, Record Producer and UI policies.
Data	Custom Employee Raise Issue table; sys_user	Stores issue records; provides requester reference.
Issue Form	Record Producer with catalog / record-producer variables	Captures issue information and maps it to table fields.
Form Behaviour	UI policies / field dependencies	Category / subcategory and field behaviour.
Configuration	ServiceNow configuration and scripting	Application configuration.

Component	Technology	Purpose
Source Control	GitHub	Version control and project documentation.
Infrastructure	ServiceNow instance dev402706	Hosts and runs the application and portal.

4. PROJECT DESIGN

4.1 Problem Solution Fit

The problem-solution fit is achieved by replacing scattered, unstructured issue reporting with a single Employee Center portal and a structured Record Producer that stores every issue as a record in a custom table.

Canvas Area	Project-Specific Definition
Customer Segments	Employees who face workplace / IT issues (network, software, hardware, access) and need to report them; secondary users are authorised ServiceNow users who track and manage the records.
Jobs-to-be-Done / Problems	Report an issue quickly from one place, describe it in a consistent format, and have it recorded. Problems: scattered reports, missing details and no central record.
Problem Root Cause	No single centralised entry point; free-form reports omit details; no dedicated record for each issue.
Triggers	A sudden problem such as VPN not connecting, a laptop or server issue, software not working or a forgotten password; being unable to continue work.
Available Solutions	Email, phone or verbal reports, informal chat and general ticketing forms: quick or structured, but not tailored to the Category / Subcategory / State fields of this project.
Customer Constraints	Employees are not always technical, have limited time and need a browser and network access to reach the portal.
Behaviour	Employees currently report through informal channels and follow up repeatedly. With the solution they open Employee Center, go to Raise an Issue, fill in the form and submit.
Channels of Behaviour	Online: Employee Center portal (https://dev402706.service-now.com/employee_request). Offline: phone calls and in-person reports, which the portal aims to reduce reliance on; it does not integrate with them.
Emotions	Before: frustrated and unsure whom to contact. After (intended): reassured because a ticket record is created.
Your Solution	Employee Center portal + Record Producer “Raise Employee Issue” + custom Employee Raise Issue table + UI policies + Commercial Services widget.

4.2 Proposed Solution

The proposed solution is a custom ServiceNow application delivered through an Employee Center-based Service Portal. The employee flow is:

1. The employee opens the Employee Center portal.
2. The employee goes to Raise an Issue and opens Raise Employee Issue.
3. The employee enters the Requester, selects Category, Subcategory and State, and enters a Short Description.
4. The employee adds an attachment if required and submits the issue.
5. ServiceNow creates an Employee Issue record in the Employee Raise Issue table (tested: EMP0001004).
6. The record can be tracked and managed in ServiceNow.

Parameter	Proposed Solution
Problem to be solved	Lack of a centralised, structured way for employees to report workplace / IT issues, leading to scattered, incomplete reports without dedicated records.
Idea / Solution	Employee Center portal with a Record Producer that captures structured issue information and creates records in a custom Employee Raise Issue table.
Novelty / Uniqueness	A tailored combination of a purpose-built custom application and table, one-to-one variable mapping with predefined choices, and a portal customised with a custom widget. It is not AI-based and does not rely on automation.
Customer Satisfaction	A clear entry point and a ticket record on submission (test record EMP0001004). Benefits are design-level expectations; no satisfaction measurement was performed.
Business Value	Academic / internal-use project; no revenue model is implemented. The value is better structure and visibility of employee issues.
Scalability	Built on a cloud platform; categories, fields and portal content can be extended. Functionally tested only, without load testing.

4.3 Solution Architecture

The architecture connects the employee, the Employee Center portal, the Raise Employee Issue Record Producer and the custom Employee Raise Issue table inside a custom ServiceNow application. sys_user provides the requester reference, UI policies apply to the Employee Issue form, and the application is committed to GitHub. Planned enhancements are shown separately and are not implemented.

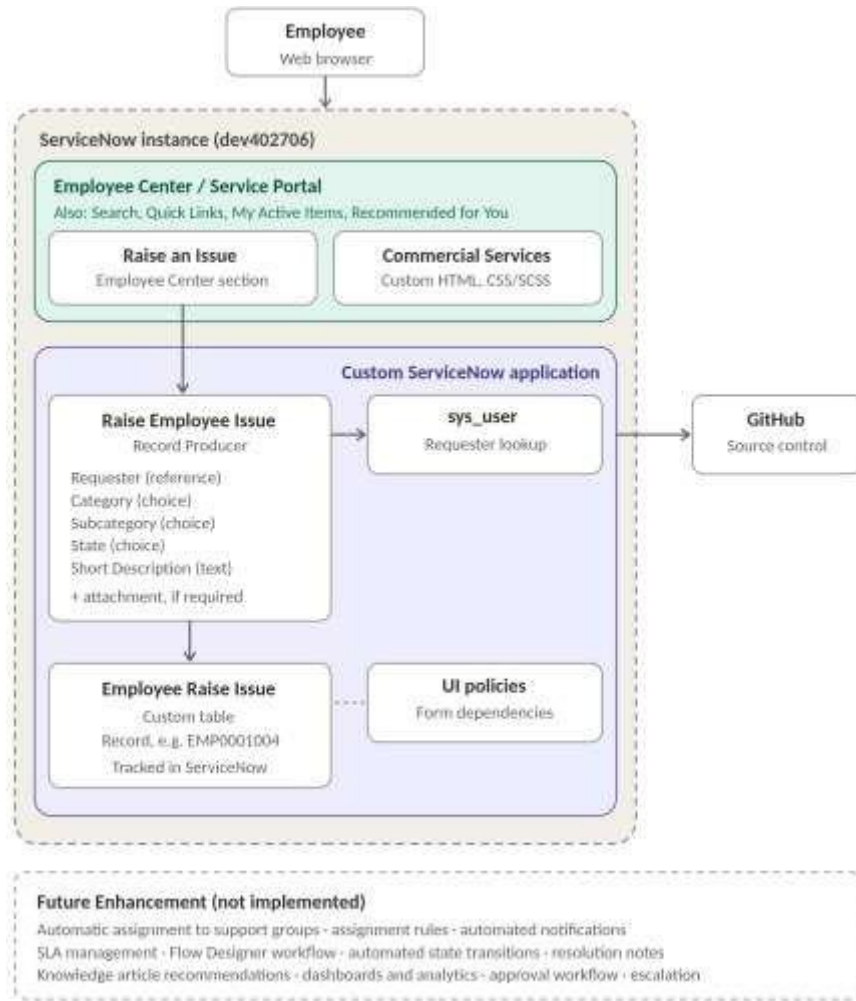

Figure 4. Solution Architecture – Employee Raise Issue Management System using ServiceNow

Component	Purpose
Employee	Raises the issue through a web browser.
Employee Center / Service Portal	Entry point with Search, Raise an Issue, Raise Ticket, Quick Links, My Active Items and Recommended for You.
Commercial Services widget	Custom widget (HTML, CSS/SCSS) displayed on the homepage; informational content only.
Custom ServiceNow application	Contains the Record Producer, custom table and UI policies.
Record Producer “Raise Employee Issue”	Captures Requester, Category, Subcategory, State and Short Description (attachment if required).
sys_user	Reference table for the Requester variable.
Employee Raise Issue table	Custom table that stores each submitted issue as a record.
UI policies	Category / subcategory and field behaviour on the Employee Issue form.
GitHub	Repository SriyaRam12/employee-issue-management-servicenow; the application was committed through ServiceNow’s source-control integration.

4.4 Implementation Details

4.4.1 Custom Application and Employee Raise Issue Table

A custom ServiceNow application was created for the project, and a custom Employee Raise Issue table was created inside it. The system generates a ticket record for every submission.

Field	Purpose	Values / Notes
Requester	User who raised the issue	Reference to a user (sys_user)
Category	Type of issue	Network, Software, Hardware, Access
Subcategory	More specific issue type	VPN, Laptop, Server, Forgot Password
State	Issue state	New, In Progress, Resolved, Closed
Short Description	Brief description of the issue	Single-line text
Ticket number	Identifies the record	Generated by the system, e.g. EMP0001004
Other fields	As required by the project	Not itemised in this report

Although the State choices exist, the current version does not implement an automated issue-resolution workflow or automated state transitions.

4.4.2 Record Producer and Variable Mapping

The Record Producer “Raise Employee Issue” creates records in the Employee Raise Issue table. Its variables are mapped to the corresponding table fields (full configuration in Appendix A).

Variable	Type	Question	Mapped field	Order
Requester	Reference (sys_user)	What is the Requester name	Requester	100
Category	Multiple Choice	Which Category	Category	200
Subcategory	Multiple Choice	What is Subcategory	Subcategory	300
State	Multiple Choice	Which State is this issue	State	400
Short Description	Single Line Text	Short description	Short Description	500

4.4.3 UI Policies / Dependencies

UI policies / dependencies were configured for the Employee Issue form, covering category / subcategory behaviour and field behaviour as required by the project. No additional UI policies beyond these were implemented.

4.4.4 Service Portal Design

An Employee Center-based Service Portal was created and configured using Service Portal Designer. The demo portal is https://dev402706.service-now.com/employee_request.

Portal Area	Description
Employee Center homepage	Landing page of the portal, customised for the project.
Search	Search area on the homepage.
Raise an Issue / Raise Ticket	Entry point to the issue-raising workflow and the Raise Employee Issue Record Producer.
Quick Links	Shortcut links on the homepage.
My Active Items	Section listing the employee’s active items.

Portal Area	Description
Recommended for You	Recommendation section on the homepage.
Commercial Services	Custom widget added to the homepage.

4.4.5 Custom Commercial Services Widget

A custom Service Portal widget, used as the Commercial Services widget, was created with custom HTML and CSS/SCSS and added to the Employee Center homepage.

Property	Specification
Heading	“Our Commercial Services” (blue heading)
Content items	24/7 Customer Support; Faster Issue Resolution; Transparent Tracking; Secure & Reliable. These are informational statements displayed on the widget, not automated features.
Background	Green / white / blue gradient
Card design	Rounded card with box shadow and padding; responsive card layout
List styling	Check-mark list with custom typography
Technologies	HTML and CSS/SCSS

4.4.6 Source Control

The ServiceNow application was connected to the GitHub repository SriyaRam12/employee-issue-management-servicenow and successfully committed. The repository is intended to hold project documentation, widget HTML/CSS, screenshots, architecture and design documentation, requirements, testing documentation and implementation evidence. The whole ServiceNow instance is not represented as ordinary source-code files; application metadata is stored through ServiceNow’s source-control integration.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning

The project work was organised into the phases and user stories below, derived from the implemented features. Sprint durations and story-point estimates are not included in this report.

ID	Phase / Epic	User Story / Work Item	Status
US-01	Application setup	Create the custom ServiceNow application and the custom Employee Raise Issue table.	Completed
US-02	Issue form	As an employee, I want a structured form to describe my issue consistently (Record Producer with five mapped variables).	Completed
US-03	Form behaviour	As an employee, I want the form fields to behave consistently (UI policies / dependencies).	Completed
US-04	Portal	As an employee, I want one portal where I can find Raise an Issue (Employee Center / Service Portal).	Completed
US-05	Submission	As an employee, I want my submission to create a ticket record (verified with EMP0001004).	Completed
US-06	Portal customisation	As an employee, I want to see the Commercial Services section on the homepage (custom widget).	Completed
US-07	Source control	As a developer, I want the application under version control (GitHub commit).	Completed
US-08	Testing	Test the portal, form, choices, submission, record creation and widget display.	Completed
FE-01	Automation	Assignment rules, notifications, SLA management, Flow Designer workflow and escalation.	Future Enhancement

6. FUNCTIONAL AND PERFORMANCE TESTING

6.1 Functional Testing

Functional testing verified the end-to-end path from the Employee Center portal to the creation of an Employee Issue record, together with the choice fields and the custom widget.

TC ID	Test Area	Expected Outcome	Result
TC-01	Employee Center accessibility	The Employee Center portal opens at the project URL.	Pass
TC-02	Raise Employee Issue availability	Raise Employee Issue is available under Raise an Issue.	Pass
TC-03	Record Producer form	The form loads with the variables for Requester, Category, Subcategory, State and Short Description.	Pass
TC-04	Category choices	Network, Software, Hardware and Access are available.	Pass
TC-05	Subcategory choices	VPN, Laptop, Server and Forgot Password are available.	Pass
TC-06	State choices	New, In Progress, Resolved and Closed are available.	Pass
TC-07	Short description	A short description can be entered.	Pass
TC-08	Submission	The issue can be submitted from the form.	Pass
TC-09	Record creation	An Employee Issue record / ticket is created (e.g. EMP0001004).	Pass
TC-10	Commercial Services widget	The custom widget displays “Our Commercial Services” on the portal.	Pass

Summary: 10 of 10 test cases passed, as reported from the testing performed. The following were not separately tested and are therefore not claimed: attachment upload, detailed UI policy behaviour, security controls and load or stress conditions.

6.2 Performance Testing

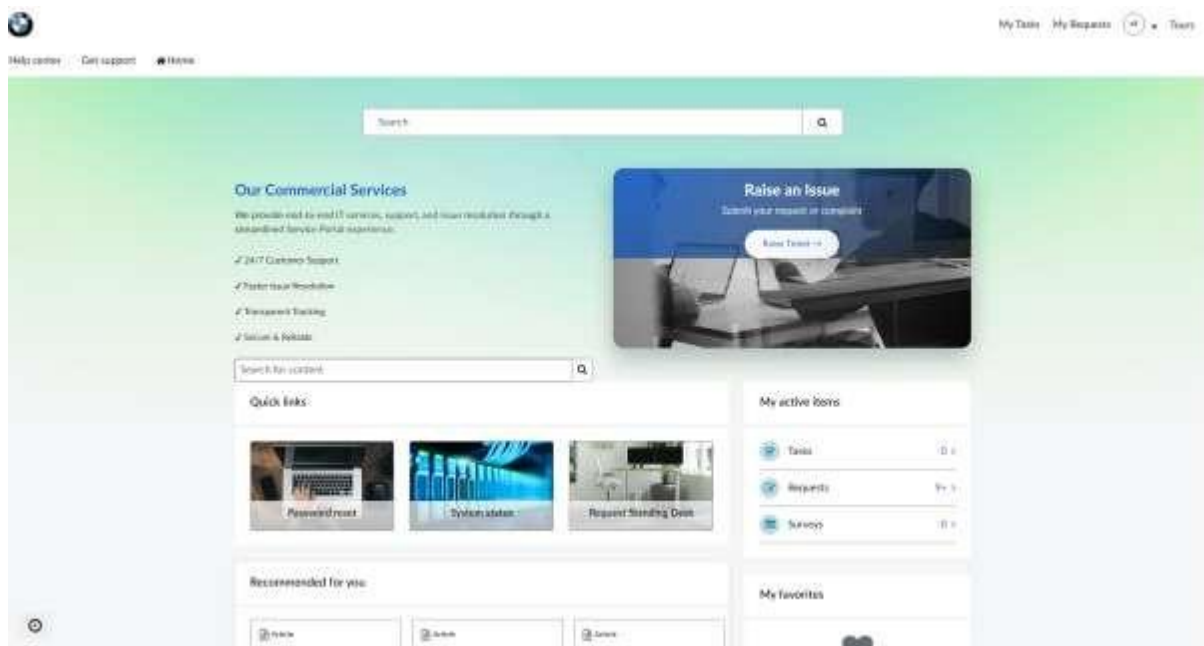

No load, stress or response-time testing was performed. The tests above are functional, based on individual test submissions on the ServiceNow instance dev402706. Performance and scalability characteristics are therefore not measured and are not claimed.

7. RESULTS

7.1 Output Screenshots

The following evidence points are to be inserted from the ServiceNow instance. Each placeholder is placed below its corresponding result.

Output 1 – Employee Center Homepage

Output 2 – Custom Commercial Services Widget

Output 3 – Raise Employee Issue Form

what is the Requester name

Which category

☒ Network

☐ Hardware

☐ Software

☐ Access

What is Subcategory

☒ VPN

☐ Laptop

☐ Server

☐ Forgot password

Which State is this issue

☒ New

☐ In progress

Output 6 – Employee Raise Issue Table

The screenshot displays the ServiceNow interface for managing employee raise issues. The left sidebar contains a navigation menu with options like 'All', 'Employee', 'Portal Notifications', 'Requests', 'Settings', 'Employee Raise Issue', 'Employee Profile', 'Employee Definition', 'Employee Profile', 'Header UI Configuration', 'Overview UI Configuration', 'Portal Configuration', 'Profile Data', and 'Setup'. The main content area shows a table of issues with columns: Number, Category, Sub-Category, State, Priority, Requester, Assignment group, and Short Description. The table lists several issues, including those related to 'Network' and 'VPN'.

Number	Category	Sub-Category	State	Priority	Requester	Assignment group	Short Description
EMP0000001	Network	VPN	New	Normal	Requester	Assignment group	Short Description
EMP0000002	Network	VPN	New	Normal	Requester	Assignment group	Short Description
EMP0000003	Network	VPN	New	Normal	Requester	Assignment group	Short Description
EMP0000004	Network	VPN	New	Normal	Requester	Assignment group	Short Description
EMP0000005	Network	VPN	New	Normal	Requester	Assignment group	Short Description
EMP0000006	Network	VPN	New	Normal	Requester	Assignment group	Short Description
EMP0000007	Network	VPN	New	Normal	Requester	Assignment group	Short Description
EMP0000008	Network	VPN	New	Normal	Requester	Assignment group	Short Description
EMP0000009	Network	VPN	New	Normal	Requester	Assignment group	Short Description
EMP0000010	Network	VPN	New	Normal	Requester	Assignment group	Short Description

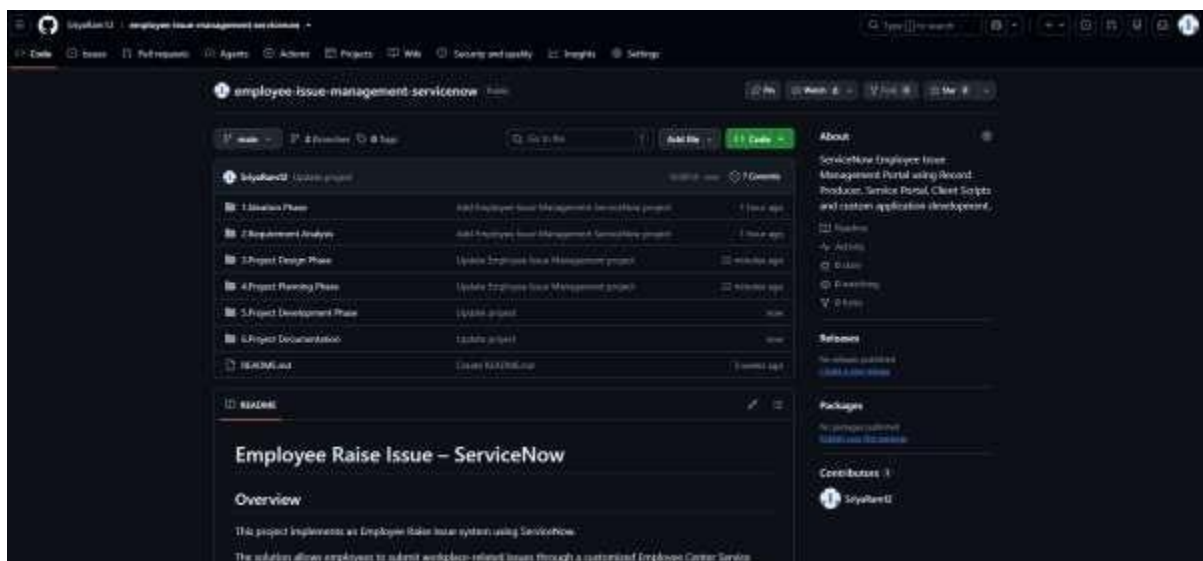

Output 7

The screenshot displays the ServiceNow interface for managing employee raise issues, showing the details of a specific issue. The left sidebar contains a navigation menu with options like 'All', 'Employee', 'Portal Notifications', 'Requests', 'Settings', 'Employee Raise Issue', 'Employee Profile', 'Employee Definition', 'Employee Profile', 'Header UI Configuration', 'Overview UI Configuration', 'Portal Configuration', 'Profile Data', and 'Setup'. The main content area shows the details of an issue with fields: Number, Requester, Category, Sub-Category, Short Description, State, Priority, and Assignment group. The issue is titled 'Employee raise issue - EMP0000008'.

Field	Value
Number	EMP0000008
Requester	Requester
Category	Network
Sub-Category	VPN
Short Description	Short Description
State	New
Priority	Normal
Assignment group	Assignment group

Output 8 – GitHub Repository

The screenshot displays the GitHub repository page for 'employee-issue-management-servicenow'. The repository is owned by 'SiyalwareID' and is a public repository. The repository description is: 'ServiceNow Employee Issue Management Portal using Record Producer, Service Portal, Client Scripts and custom application development.' The repository has 7 commits and 1 contributor. The repository is categorized under 'Software Development' and 'Web Development'. The repository is licensed under 'MIT License'. The repository is tagged with 'ServiceNow', 'Employee Issue Management', 'Record Producer', 'Service Portal', 'Client Scripts', and 'Custom Application Development'. The repository is tagged with 'ServiceNow', 'Employee Issue Management', 'Record Producer', 'Service Portal', 'Client Scripts', and 'Custom Application Development'. The repository is tagged with 'ServiceNow', 'Employee Issue Management', 'Record Producer', 'Service Portal', 'Client Scripts', and 'Custom Application Development'.

Employee Raise Issue – ServiceNow

Overview

This project implements an Employee Raise Issue system using ServiceNow. The solution allows employees to submit workplace-related issues through a customized Employee Career Service.

7.2 Summary of Results

Objective	Result	Status
Centralised portal for raising issues	Employee Center-based Service Portal available at the project URL.	Implemented
Structured issue form	Record Producer “Raise Employee Issue” with five mapped variables.	Implemented
Issue record creation	Submission creates an Employee Issue record (e.g. EMP0001004).	Implemented
Customised portal experience	Custom Commercial Services widget on the homepage.	Implemented
Source control	Application committed to GitHub.	Implemented
Automated resolution / assignment / SLA / notifications	Not part of the current version.	Future Enhancement

8. ADVANTAGES & DISADVANTAGES

Advantages	Disadvantages / Limitations
Single, centralised entry point for raising issues.	The current version supports issue creation and record management only; it does not automatically resolve, assign or escalate issues.
Structured form with predefined Category, Subcategory and State choices.	State is chosen on the submission form; automated state transitions are not implemented.
Each submission is stored as a record with a ticket number.	No SLA management, notifications, approval workflow or Flow Designer automation.
Records can be tracked and managed in ServiceNow.	Tested functionally on one instance; no load or performance testing was performed.
Customised portal experience with the Commercial Services widget.	The widget's statements are informational and are not measured or automated features.
Application is under GitHub source control.	The project is not AI-based and has no external API integrations.
Built on standard ServiceNow features and can be extended.	Depends on correct ServiceNow configuration and permissions.

9. CONCLUSION

The Employee Raise Issue Management System using ServiceNow project demonstrates how ServiceNow can be configured to give employees a centralised way to raise workplace and IT issues. Employees use an Employee Center-based Service Portal, complete the structured Raise Employee Issue form, and submit it to create an Employee Issue record in a custom table. A test submission successfully created the ticket EMP0001004, confirming the end-to-end flow from portal submission to record creation.

The project also demonstrates a custom ServiceNow application, a Record Producer with variables mapped to table fields, UI policies / dependencies, a custom Commercial Services widget styled with HTML and CSS/SCSS, and GitHub source control. The current version focuses on issue creation and record management; automation of assignment, notifications, SLA and resolution remains future work.

10. FUTURE SCOPE

The following items are planned enhancements and are **not** part of the implemented project:

- Automatic assignment to support groups and assignment rules. (Future Enhancement)
- Automated notifications. (Future Enhancement)
- SLA management. (Future Enhancement)
- Flow Designer workflow. (Future Enhancement)
- Automated state transitions. (Future Enhancement)
- Resolution notes. (Future Enhancement)
- Knowledge article recommendations. (Future Enhancement)
- Dashboards and analytics. (Future Enhancement)
- Approval workflow. (Future Enhancement)

- Automated escalation. (Future Enhancement)

11. APPENDIX

A. Record Producer Configuration

Record Producer name: **Raise Employee Issue**. Target table: Employee Raise Issue (custom table).

Order	Variable	Question	Type	Mapped field	Choices
100	Requester	What is the Requester name	Reference (sys_user)	Requester	n/a
200	Category	Which Category	Multiple Choice	Category	Network, Software, Hardware, Access
300	Subcategory	What is Subcategory	Multiple Choice	Subcategory	VPN, Laptop, Server, Forgot Password
400	State	Which State is this issue	Multiple Choice	State	New, In Progress, Resolved, Closed
500	Short Description	Short description	Single Line Text	Short Description	n/a

B. Widget Source

The Commercial Services widget (HTML and CSS/SCSS) is part of the ServiceNow application and is not reproduced in this report. Its design specification is given in Section 4.4.5.

C. GitHub & Project Demo Link

Item	Link
GitHub repository	https://github.com/SriyaRam12/employee-issue-management-servicenow
Demo portal	https://dev402706.service-now.com/employee_request
Project demo video	[Add demo link]

D. Core ServiceNow Records Used

Record / Table	Meaning	Project Use
Employee Raise Issue (custom table)	Issue / ticket record	Stores each submitted employee issue.
sys_user	User	Reference for the Requester variable.
Record Producer “Raise Employee Issue”	Service Catalog record producer	Form that creates the Employee Issue record.
